

More responsibility

Making **eco-design** is in itself a step towards sustainable development, taking into account economic, social and environmental issues. The goal of such an environmental initiative is to achieve concrete environmental improvements to products, by measuring their impacts at each stage of their life cycle.

Transparency

Based on the LCA methodological approach, a clear and transparent information about Happening impacts on the environment is communicated through Environmental Product Declarations (EPD – ISO/TR 14025) that do not include value based judgments. Furthermore, Happening officially complies with the French environmental certification NF – Environnement (ISO 14024) awarded by the CTBA (Centre Technique du Bois et de l'Ameublement).

Happening was designed:

With materials which have low impact on the environment **24%** recycled materials
no hazardous materials
(no PVC, no Chrome, no Mercury)

For a quick and easy disassembly with common hand tools **low** quantity of components

For an easier end of life management **99%** recyclability

Steelcase

Enhance your storage

Happening

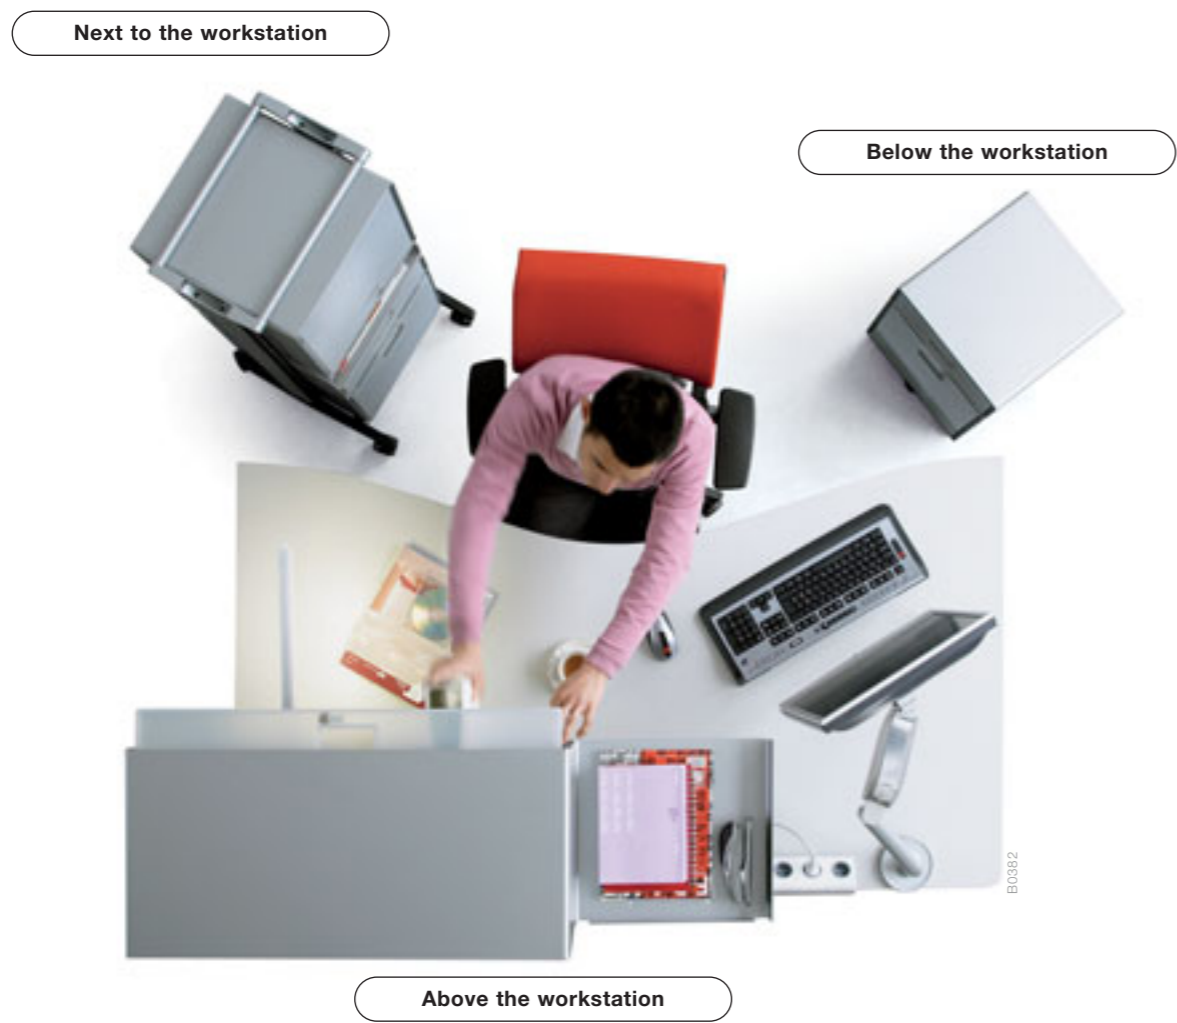

- > smarter
- > more organised
- > more tailored
- > more aesthetic
- > more scope

Most of us would agree that our workplace storage could be much more effective. Studies indicate that we may **spend up to 30%** of our time each workday **looking for information!** Of course, we all need to surround ourselves with tools, documents, information and personal objects, but these things often become messy and disorganised. Traditional storage systems don't always give us the functionality we need, and their design may not be very inspiring. At Steelcase, we take a user-centred approach to designing storage systems, aimed at supporting both individuals and teams with better ways to organise and access their things. This is the thinking behind Happening – **a smarter, easier and altogether better way of storing things**, and the **ideal complement to your existing storage solutions.**

More convenient

By using the space **above, below and next to the workstation**, Happening provides a solution all around the user, offering **one unique design for all their storage needs**. This ensures that tools, documents and objects are always conveniently stored within **easy reach**, making work more pleasurable and productive.

More organised

Happening makes it easy to store things... and easy to find them again. The system provides smart internal organisational tools and accessories, as well as other helpful features like a lock function or labelling, ensuring that the user can store things efficiently and effectively.

Interior fittings for drawers

More tailored

Happening recognises that today's **workstyles** and **technologies** create new storage demands. And that different individuals, organisations and company cultures have their own specific needs and preferred way of working. Based on this insight, Happening allows people to choose the storage solution that suits their own personal or group preferences to work the way they want. Steelcase's workspace architecture solution, **Forward**, provides structure and freedom to the user. Happening ideally complements Forward with elements that support **seating and standing interaction**. In addition, Happening brings **mobility and structure** to the space with shared storage elements.

MANAGE CONNECTIONS

More possibilities

By optimising the storage attributed to each employee, Happening provides solutions which are tailored to fit an organisation's storage needs **within the constraints of the existing office space**. Happening also supports users who don't spend a lot of time at the same desk (i.e. call centre staffers, mobile workers or consultants), providing them with a **personal box in a shared storage element** which can be used in desk-sharing situations.

The system's geometrical design purity and quality finish give its various units a highly attractive look, either in large or small configurations. **Everything fits together in perfect aesthetic harmony**. Happening transforms the office from a bland landscape into an **inspiring work environment** where people can enjoy working at their best.

Tasking – Expert group

These experts work mostly individually to deepen their expertise. Their workstation offers a high privacy and a large personal storage capacity at the desk and close to the desk.

Tasking – Process cluster

Groups carrying out process work are mostly sedentary and their activities take place at their workstation. They require personal storage within easy reach to store and retrieve documents and objects.

Teaming – Process team

This process team spends most of its time carrying out predefined tasks and very similar activities but with a high degree of interaction. Both personal and shared storage is provided to support the switch from individual to collaborative work.

Teaming – Project team with meeting space

Project Team members are people who perform a variety of tasks and require a balance between individual and collaborative work. Mobile personal storage enables them to choose where they want to work either at an individual workstation or in a meeting space. Shared storage delineates the team space, allows easy access to information, and can be locked for confidentiality/security reasons.

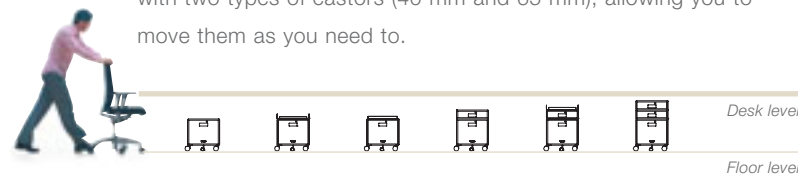

More scope

Happening offers a high degree of choice without high complexity. The system allows for a multitude of different configurations using the same set of basic core elements.

The various boxes, drawers, shelves and other elements, including the accessories, fit easily together across the range, adapting to all kinds of requirements, workstyles, applications and architectural situations.

Below the workstation

Happening offers a range of different units, configurations and internal fittings which provide a diversity of solutions for meeting people's individual needs for managing storage below the workstation. For the maximum flexibility, these units are supplied with two types of castors (40 mm and 65 mm), allowing you to move them as you need to.

Accessories – Below

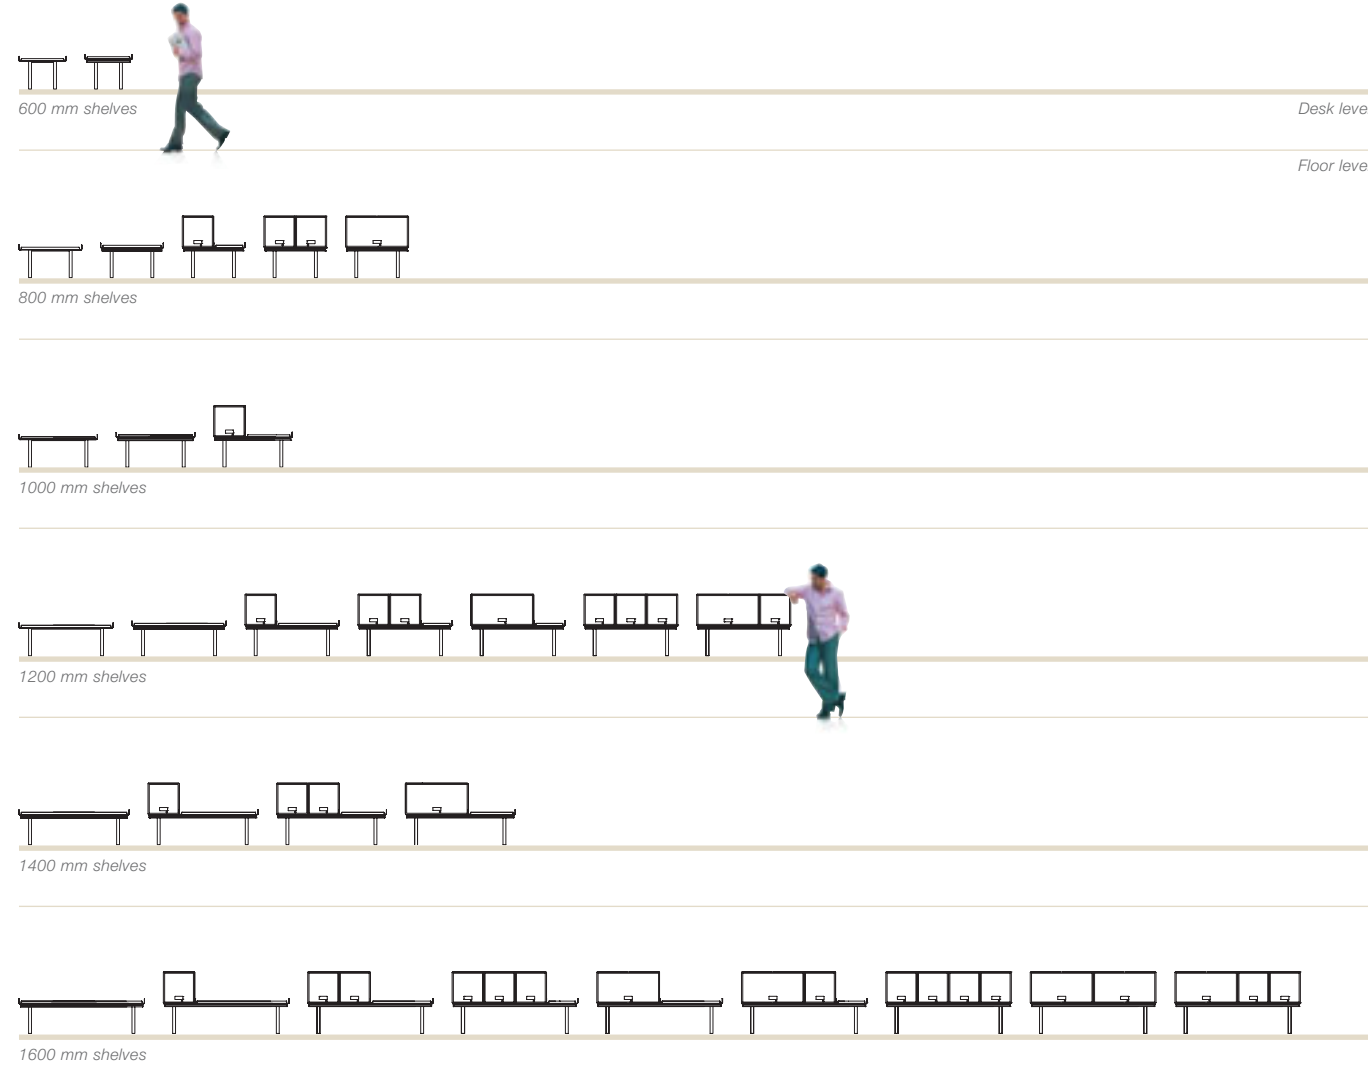

Cushion on Cubic and Net with magnetic fixing

Cubic box with shelf and drawer

Interior fittings

Above the workstation

Happening makes the most of vertical space to increase total storage area without using more valuable floor space. This group includes all components located above the work surface (available in 6 widths): plain shelves, accessory shelves, accessory shelf / box combinations, accessory box. Accessories increase the effectiveness.

Accessories – Above

Brica underneath the Above structure

Forward box with interior fittings

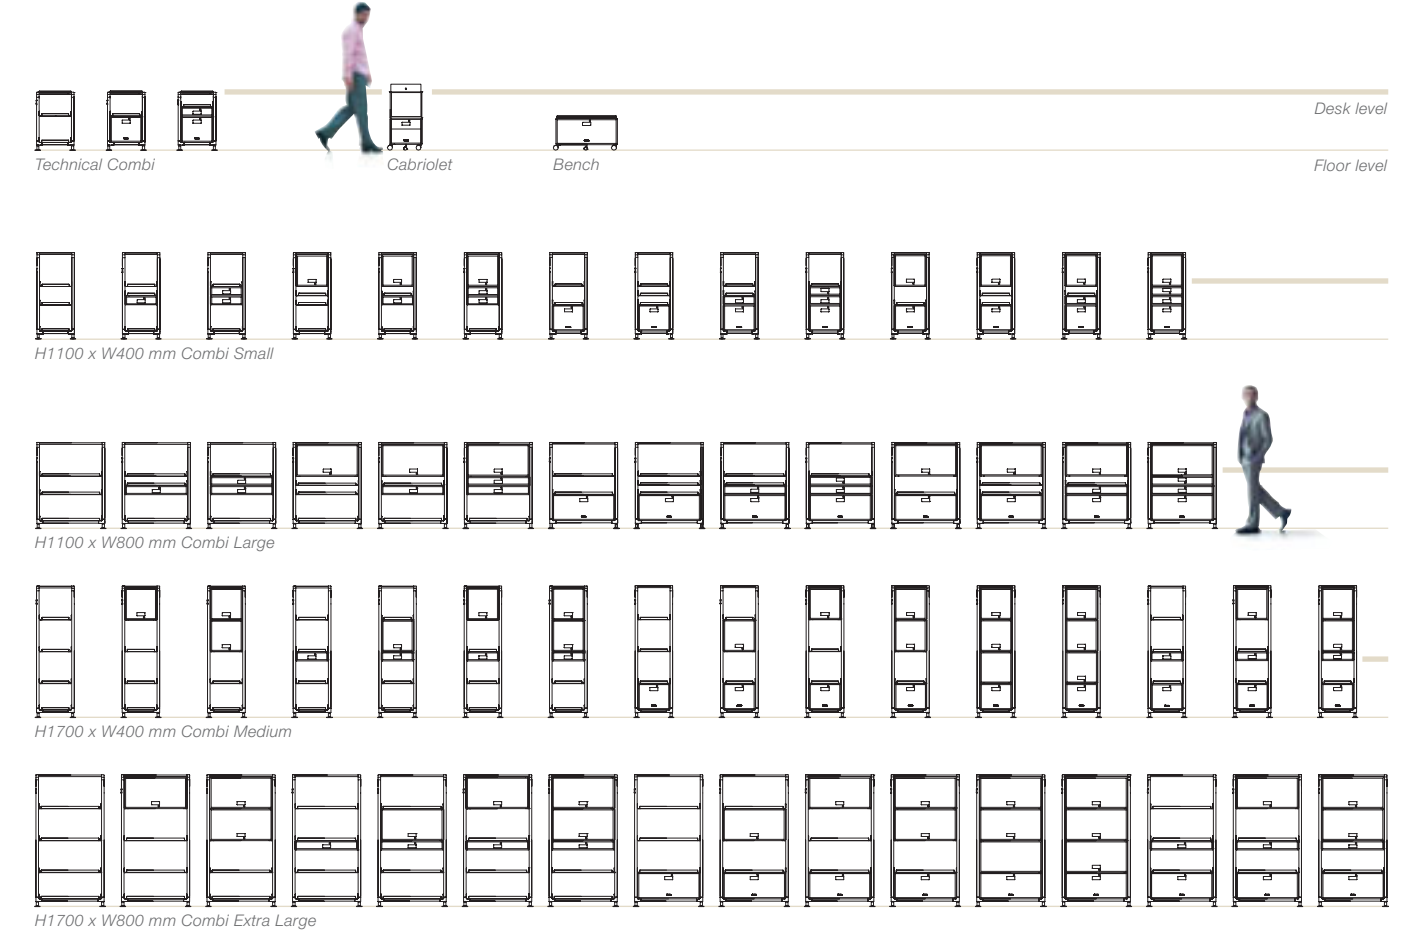

Task lighting, rail on the Above structure

Book ends for shelves

Translucent screen used as space division

Next to the workstation

The third and largest product family in the Happening system consists of storage units which can be positioned next to the workstation, providing a medium to large storage capacity. They are divided into seven groups defined by their dimensions – heights of 1100 mm / 1700 mm, widths of 400 mm / 800 mm (Combi Small, Large, Medium, Extra Large) – and by their functions (Technical Combi, Cabriolet and Bench).
