Do what you do better.™

Steelcase

Let's B. Better for your back. Let's B is better for your back because it adapts to your unique posture and patterns of movement when you're seated. That gives your back better support and more freedom of movement, and is a comfortable and healthy way to sit. It's all because Steelcase understands spinal motion better thanks to our unique user-based research initiative, The Motion Study. Here are the 2 key discoveries implemented on Let's B.

The upper and lower regions of the spine move independently as we change posture, not as a single unit. Let's B has a flexible backrest that follows your natural movements, giving your seated upper body complete freedom of movement.

The upper and lower back regions require different kinds of support. Let's B's backrest is padded with two different kinds of foam. The upper part contains dense foam to support your upper back, while the lower part is covered with a pillow of soft foam to cushion

your sensitive and flexible

lumbar region.

Let's B has easy-to-find intuitive controls so you can set it up exactly how you want it. The user's manual is stored in the backrest itself, so it's always close at hand: simply reach back and pull it out. Interactive userguide available under: www.letsb-steelcase.com
