Office order: Nice and tidy and yet discreetly visible

The semi-open "Cabrio" is both visibility protection and shelf

Tokyo quite openly sets homely trends

Tokyo is characterized by perfect workmanship from top to bottom. Its metal frames are stable and solid, the shelves slot in for a perfectly flush finish. Static stability is provided by transparent or black legs, casters ensure quick and easy mobility, anywhere at any time. Open shelves provide unobstructed transparency, transparent glass lets out only a shimmering hint of what is behind. You never knew there could be so many interesting faces to filing and storage, tidying and organization!

Rethinking the office

Tokyo

Rethinking the office

Pure & light

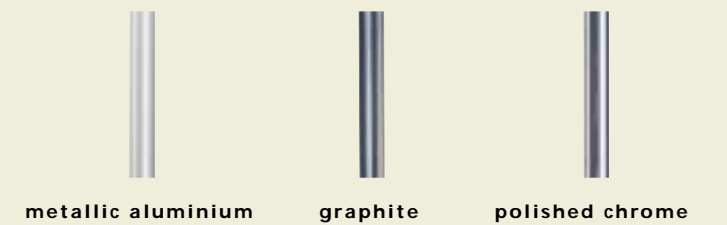

Tokyo is the expression of a new lifestyle and office perception. A shelving system design which gives off a light and airy feel, no matter whether closed or open. What makes Tokyo so distinctive is its no-frills, clear cut design based on a metal framework. With a perfect finishing touch provided in the form of transparent glass inserts and granite or steel shelves. And the interaction of wood creates a unique harmony. Tokyo shelving is so attractive it is almost "wasted" in the office.

However you like

Tokyo lends itself better to mix and match combinations than almost any other shelving system. It goes up and comes down in the time it takes to link a few frame elements together. An unbeatable benefit when it comes to moving things round and transportation. Four different width measurements offer storage and display space for any type of occasion, covering the whole range from table to cupboard height. A shelving system which can blend almost invisibly into the background or stand out as an eyecatcher – depending on how you equip it.

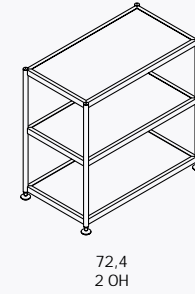

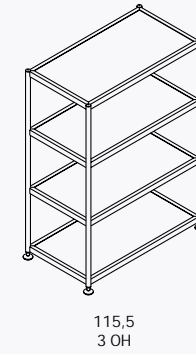

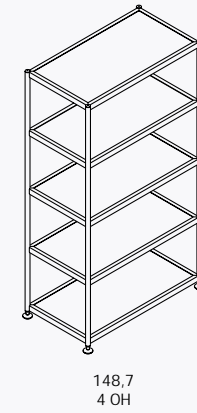

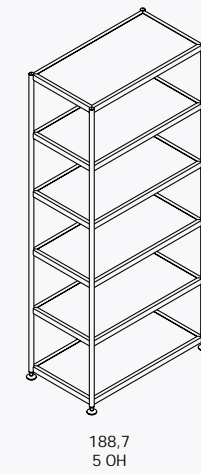

Tokyo metal frames come in an aluminium, chrome or granite colour. The panels come in soft green or blue transparent glass. Or for real purists, an open design with a bare granite shelf. Tokyo offers powder-coated steel shelves in a choice of no fewer than 13 different variants.
